

# Battle of Neighborhoods: Where to Live in Calgary?

By: Juan Sebastian Gomez Ramirez

## 1. Description of the Problem and Discussion of the Background

### Week 1: Introduction Section

*I chose to work on a rather personal question that I've been asking myself during the past few months. Therefore, you will find this introduction section somewhat less-technical than the rest of the sections in this project. I immigrated to Canada 4 years ago, in 2015. I did my Masters at the University of Alberta, located in Edmonton. I did it in Geotechnical Engineering, specialized in Reservoir Geomechanics.*

*I love Edmonton, is a city full of parks, outdoors activities, festivals, and awesome landscapes. Nonetheless, the majority of the Oil & Gas Companies have their headquarters down in Calgary, and they are my main target when I am searching for a suitable job position. This is the main reason I find necessary to move to that city.*

*During the course of this final project, I will be Scraping some information from the different Calgary's neighborhoods. Classifying them in accordance with my personal needs and taste and finding a proper place to move, in case is needed for a future job position.*

## 1. Description of the Data and Problem Solving Methodology

### DATA SET: CALGARY NEIGHBORHOODS

*Obtained from the URL: [https://en.wikipedia.org/wiki/List\\_of\\_neighbourhoods\\_in\\_Calgary](https://en.wikipedia.org/wiki/List_of_neighbourhoods_in_Calgary) ([https://en.wikipedia.org/wiki/List\\_of\\_neighbourhoods\\_in\\_Calgary](https://en.wikipedia.org/wiki/List_of_neighbourhoods_in_Calgary)).*

*The Data Base chosen for this project contains the following information from the different neighborhoods in Calgary: Ward, Sector, Type of Neighborhood (Residential, Park, Industrial, Residual Area), Population (@2012), Population Density, and Area in km2.*

*Additional to the statistical information obtained from Wikipedia, Geographical coordinates (including Latitude and Longitude) from each neighborhood will be added to the Data-Frame, this with the main purpose of serving as valuable information for pulling Venues out of each neighborhood and analyzing the overall profile of each neighborhood.*

### PROBLEM SOLVING METHODOLOGY

- 1. Scrape the Neighborhoods information from Wikipedia Data base*
- 2. Build an appropriate Data-Frame with the information*
- 3. Obtain the Geographical Coordinates Information from each Neighborhood*

- 4. Use Foursquare to explore the Venues and build a profile of each Neighborhood**
- 5. Filter the Neighborhoods based on their profile**
- 6. Build graphical representations to facilitate the User Data Analysis and Results Presentation**
- 7. Analysis of Results and Discussion**
- 8. Conclusions form the Study**

## TARGET AUDIENCE

- 1. Fellow immigrants thinking on moving to Calgary. This analysis will provide basic but useful information regarding the profile of each Neighborhood in Calgary and might help them to choose the most suitable place for living.**
- 2. Fellow starter Data Scientists, which can find interesting the scope and understandable approach taken during the course of this project, would use it as learning platform and/or consulting data base.**

## Week 2: Coding Section

## CALGARY NEIGHBORHOOD CLUSTERING: VENUES SIMILARITIES

This Visualization Tool will improve the insights on the previous Clustering Analysis. Neighborhoods represented with same-color marking will have similarities in their Venues

In [46]:

```
#Start Calgary Top Neighborhoods Clustering Process
# Set number of clusters
kclusters = 3

Calgary_grouped_clustering = calgary_grouped.drop('Neighborhood', 1)

# run k-means clustering
kmeans = KMeans(n_clusters=kclusters, random_state=0).fit(Calgary_grouped_clustering)

# check cluster labels generated for each row in the dataframe
kmeans.labels_[0:15]

# add clustering labels

neighborhoods_venues_sorted.insert(0, 'Cluster Label', kmeans.labels_)

Calgary_merged = Calgary_TopFinal

# merge Calgary_grouped with Calgary_data to add Latitude/Longitude for each neighborhood
Calgary_merged = Calgary_merged.join(neighborhoods_venues_sorted.set_index('Neighborhood'), on='Neighborhood')

Calgary_merged.head(15) # check the last columns!
```

Out[46]:

        fill_opacity=0.7).add_to(map_clusters)

map_clusters
```

Out[48]:

## RESULTS SECTION

**1. The Neighborhoods in Calgary were filtered in accordance with their main type. For the purpose of this study, neither Industrial, Major Parks Zones or Residual Areas were taken into account. Only Residential Neighborhoods were analyzed for the overall profile of their main Venues.**

**2. The Results obtained from this study indicate that either the Central or South sides of Calgary contain the majority of the Neighborhoods surrounded by Grocery Stores, Fast Food Restaurants or Parks; being these three types of venues the ones chosen by the author as main reasons to locate a proper place for living. These venue types can be easily changed to redirect the analysis and explore other results from the model.**

**3. In general, even though the Central and South sides of Calgary are more suitable to be inhabited in accordance with their venues, North side Neighborhoods with similar characteristics are less-densely populated, which can be a determining factor when thinking about peacefulness of the neighborhood. Silverado was found to be an exception of this observation.**

**4. It is more common to find a Neighborhood with surrounding Grocery Stores or Restaurants (in general) than parks. Therefore, If thinking about work out possibilities during summer, it would be more viable to choose a Neighborhood with acceptable profile and within a walking distance from a Major Park Zone.**

## DISCUSSION AND RECOMMENDATIONS

**According to this analysis, Central and Southern sides of Calgary will provide the most appropriate Neighborhoods to live in when prioritizing the presence of Grocery Stores, Restaurants and Parks around. In spit of that, Central and Southern sides of Calgary are within the most populated areas, so this will not represent that they are the most peaceful ones. North Side on the contrary, can be less populated and more quiet area.**

**However, this analysis does not demonstrate the full capability of this model. First, Different analysis can be made: variation of the required Neighborhood profile, variation of the desired population density. Second, it can be complemented with Calgary's crime data, which will give a sense of the safety standards of each Neighborhood. Third, it can be complemented with Calgary's km2 price data, which will give a more comprehensive sense of the suitability of buying a property on each Neighborhood.**

## CONCLUSIONS

**During the course of this project, users would be able to get a small glimpse of Data Science applied to solve a real problem. The power of Python libraries, combined with Foursquare API and Folium maps will allow data scientists and programmers to analyze infinite cases and solve almost any type of problem (if Data is available).**

**There are always special considerations, limitations and drawbacks, specially when it comes to Data Science's experience. This model is not intended to solve complex situations related to demographic behavior of Calgary's Neighborhoods, but it can become the first step on a more advanced project in this matter. I hope you've enjoyed it as much as I did.**
